1 Scope

1.1 This Equipment Note gives guidance on the equipment required for Hospital Accommodation for Children in a District General Hospital and replaces Hospital Equipment Note No 23 issued in January 1965. The Note should be read in conjunction with Health Building Note No 23.

2 General considerations

2.1 Equipment Note No 1 (Equipping a Hospital Building) provides an introduction to the series of departmental Equipment Notes, advice on their application and guidance on the task of preparing equipment schedules for individual building projects. This departmental Equipment Note is intended to be used within the general planning framework set out in Hospital Equipment Note No 1 and in the manner described therein. The equipment listed in this Note is classified in four groups: –

Group 1: Items (including engineering terminal outlets) supplied and fixed within the terms of the Building Contract.

Group 2: Items which have space and/or building construction and/or engineering service requirements and are fixed within the terms of the Building Contract but supplied under arrangements separate from the Building Contract.

Group 3: As Group 2, but supplied and fixed (or placed in position) under arrangements separate from the Building Contract.

Group 4: Items supplied under arrangements separate from the Building Contract, possibly with storage implication but otherwise having no effect on space, building construction or engineering service requirements.

It is recommended that these classifications be used in all stages of planning.

3 Special considerations in respect of this Note

3.1 The equipment detailed in this Note is regarded as generally suitable for providing for diagnosis and treatment of children suffering from acute medical and surgical conditions as in-patients or day patients and for investigation as out-patients or day patients, including comprehensive assessment.

3.2 Separate chapters listing the suggested equipment requirements for the various elements comprising the Children's Department are detailed under.

6.1 In-patient Nursing Section of 20 beds/cots which is considered the maximum number that can be supervised by one Nursing Sister/Charge Nurse at any one time.

6.2 Day care provision of a multi-bed room with 6 beds and 2 single bedrooms to provide flexible use in the accommodation.

6.3 Out-patient facilities with appropriate equipment to meet the normal out-patient needs of paediatric medicine.

6.4 Comprehensive Assessment Centre for multi-disciplinary diagnostic assessments.

3.3 Since the combination of single and multi-bed rooms will vary according to local circumstances, the equipment has been shown on an activity space basis so enabling any arrangement to be catered for.

3.4 For recurring rooms such as toilets, offices and the like, equipment is listed for one room and will be required to be multiplied by the number of such rooms included in the project.

3.5 For those rooms which frequently occur in common form throughout health buildings the equipment listed is based on the Common Activity Spaces Building and Equipment Notes, Vol 1 (in draft at the time of publication of this Note).

3.6 It is realised that the equipment requirements in particular departments may vary from the recommendations because of the nature of the work undertaken or the techniques employed, and some variation will be necessary within Basic Lists. As indicated in Equipment Note No 1 Section V, the requirements will need to be examined in consultation with the head of the department or main users.

3.7 Some fixed items of equipment (Group 1) have already been mentioned and costed in the Health Building Note, but it has been thought useful to include them again in the Equipment Note which represents the results of a comprehensive review of requirements. Reference should be made, however, to the Building Note Chapter 3 Engineering Services – for further information on the mechanical services and electrical installation. It is particularly important that before purchasing equipment requiring services there should be adequate consultations to ensure compatibility. Structural elements, floor coverings, non-specialised heating and lighting fittings and similar items which are basic to any building are not included in the Equipment Note.

3.8 Throughout the schedule, for the sake of uniformity, references to dispensers, paper towels are associated with holder, sack, freestanding. Suitable adjustments will need to be made where other towels are to be used. Similarly with soap dispensers where bars of soap are preferred.

3.9 In all cases metric measurements etc have been quoted wherever possible.

3.10 It is for individual health authorities to make rules about smoking in hospitals and health buildings under their control and management (see Departmental Health Circular HC(77)3). Smoking is undesirable and bans in acute medical and surgical nursing sections have been successfully introduced in hospitals where the medical and nursing staff have co-operated in enforcing them. Some patients become distressed and discomforted by the presence of tobacco smoke. In hospital accommodation for children smoking should be positively discouraged and therefore no provision has been made for the supply of ashtrays. Special smoking areas may be made available for parents and visitors eg day room, overnight stay but they should not be in any way better or more attractive than non-smoking accommodation.

3.11 Catering

3.11.1 The guidance assumes that there will be a centralised catering service delivering individual trays or plated meals from a central kitchen for older children and adolescents and that a central washing-up service is available. The function of the pantry is therefore limited to the preparation of beverages and light snacks. Younger children and toddlers may be served from an insulated bulk food trolley.

3.11.2 Food distribution trolleys and crockery, cutlery, etc for main meals have not been included in this Equipment Note as they will normally form part of the equipment provided in the Central Kitchen.

3.12 Educational Facilities

3.12.1 No provision has been made in this Equipment Note for the statutory educational facilities for children during their stay in hospital. Where the need for such facilities is established and hospital accommodation is made available, the provision and cost of all equipment for school rooms is a matter entirely for the local educational authority. No cost guide allowance has been given in this Equipment Note for educational facilities.

3.12.2 Guidance on the educational requirements for children in hospital is given in the Design Note published by the Department of Education and Science entitled "Meeting the Educational Needs of Children in Hospital."

3.13 Activity Data

3.13.1 In the selection of the equipment required the Department of Health and Social Security Activity Data Base has been used to identify the specific items of equipment to enable the functions, tasks or activities to be performed in a particular room, space, bay or corridor. A list of Activity Data Space and Unit Sheets is provided in Chapter 6.

4 Damage by equipment to buildings

4.1 Many items of equipment are potential causes of recurring damage to the fabric of NHS Buildings and other equipment. Damage can be minimised not only by incorporating protective materials in building structure but also by ensuring that the equipment selected is designed to eliminate, as far as practicable, those features which are liable to cause damage. Particular attention is drawn to BS 4322/68 which sets out recommendations for the buffering of hospital vehicles such as trolleys and refers less specifically to other categories of equipment. Precautions should also be taken to prevent damage caused by projections from stationary equipment.

4.2 Early co-operation with the architect and designers is essential.

5 Cost

5.1 No cost guidance is given in this Note because such costs rapidly become out-dated. The room cost guide figures for basic equipment (Groups 2, 3 and 4) applied to the standard schedules of basic accommodation, together with individual item costs, are contained in the Standard Equipment Scheduling System. The cost allowance for this department will be published from time to time by the Department when revising the Equipment Cost Allowance Guide. (ECAG)

5.2 In this Note no account has been taken of items supplied from the Hospital Sterilization and Disinfection Unit.

5.3 The Standard Equipment Scheduling System provides a computer based room library catalogue with each room identified by a code number. The room code numbers appropriate to the rooms included in this Equipment Note are listed at pages 3–7.

5.4 The data base of the Standard Equipment Scheduling System should be consulted where a basic room needs to be modified to meet local requirements. The room library offers a wide range of rooms and departments with equipment listed together with related costs.

5.5 The Equipment Scheduling System offers many advantages in the preparation of schedules of equipment, budgeting control and commissioning of a project.
